Active Weather Warnings, Watches and Advisories by County:

WEATHER SYNOPSIS BY REGION

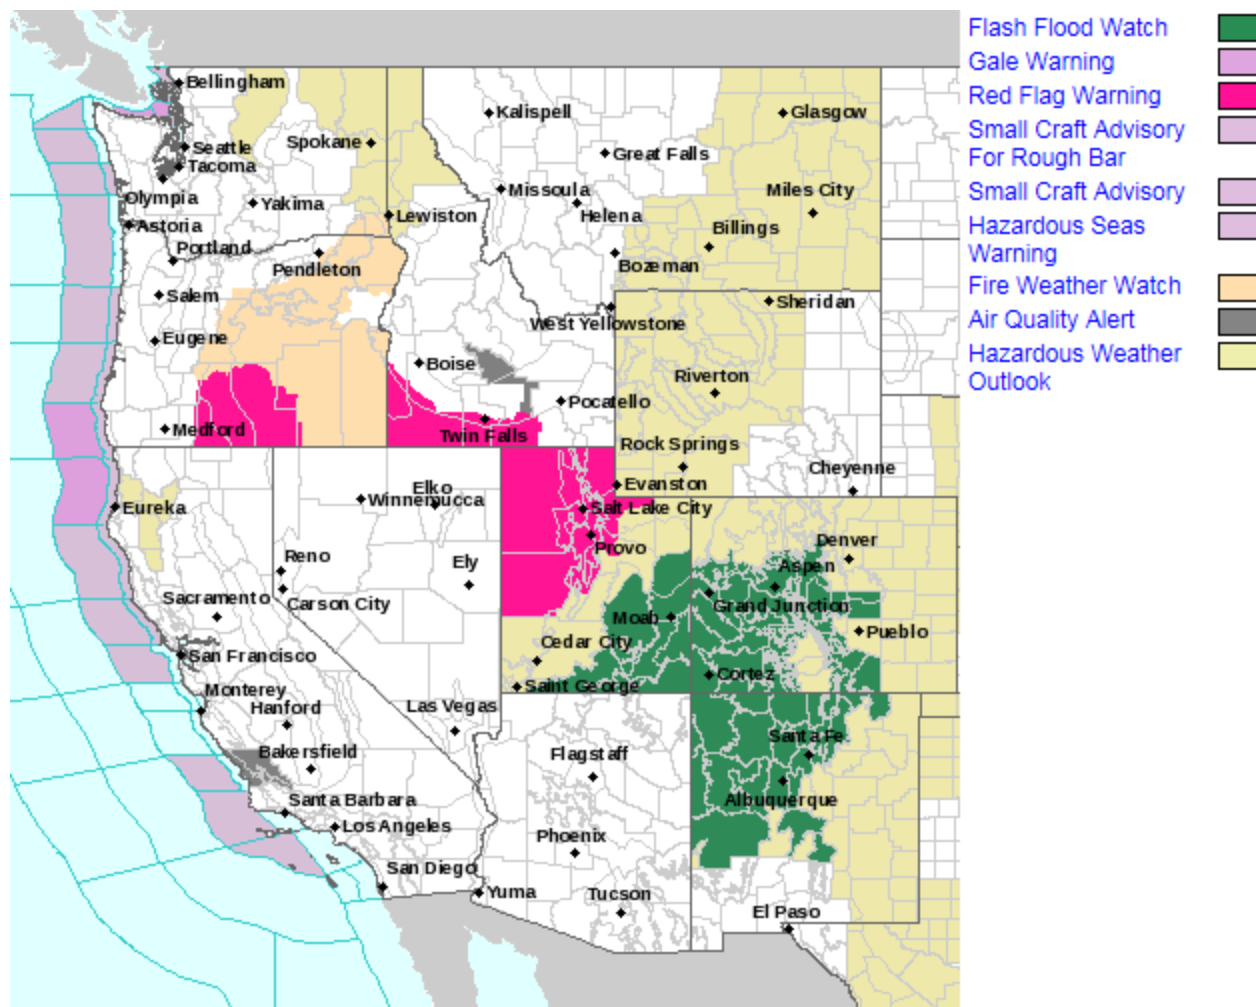

NORTHERN CALIFORNIA

A low pressure trough along the Washington/Canadian border will be moving east today and its southern edge will continue to keep North Ops under a dry flow pattern. A weak low pressure trough will develop over the region Thursday, and some form of it will linger over the region through the middle of next week. A bit of moisture will make it into North Ops over the next few days, and some very isolated afternoon and evening thunderstorms could develop in the far northern areas as early as Thursday, but such thunderstorms look a bit more probable Friday and possibly Saturday. Any lightning would be rather dry. High Risk designations for the possible lightning are not in place at this time, mainly because there would likely be very few storms with limited amounts of lightning. The warmest inland valleys will be around 103 today, and it will probably be the warmest we'll see for the next week. Afternoon RH values will commonly be in a range of 5-15% away from the marine layer. Overnight recoveries will vary considerably, but in general, expect mostly moderate recoveries and thermal belt conditions to develop where some poor recovery could occur. As the trough settles in over the region, the coastal marine layer will become fairly deep for this time of year at around 1500-2000 ft thick. Coastal low clouds and patchy fog will return. Winds will generally be of local diurnal patterns for the 7 day period, but moderately strong, daily gusty afternoon winds will also be likely to develop in The Delta region.

SOUTHERN CALIFORNIA

Scattered showers and thunderstorms will continue across the deserts bordering Nevada and Arizona through this evening as abundant monsoonal moisture remains over the far eastern part of our area. An isolated shower or thunderstorm will be possible over Central California from the Sierra Crest east and across the San Bernardino and Cleveland National Forests and their surrounding desert locations through this afternoon. Dry southwest flow aloft will prevent any shower and thunderstorm activity from occurring in our region Friday through the middle of next week. A weak Pacific trough will bring near to a little below normal temperatures through the middle of next week. Maximum temperatures will be in the upper 70s and 80s across the mountains and in the upper 80s and 90s in the valleys today. Temperatures will cool a few more degrees Friday, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be mainly in the single digits and teens across Central California and between 15% and 30% across Southern California today. By Friday, widespread minimum humidity in the single digits and teens will occur above and inland from the marine layer. These very dry conditions will continue through the middle of next week. The marine layer will be between 2,000 and 3,000 feet deep Friday through the middle of next week. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Friday through the middle of next week.
